

React Hooks

As easy Way as possible

<GreatCoders/>

Now , what is Hooks ?

Hooks are prebuild function fo **react**, introduced after **V16.8** to give all the **feature of class component** to functional component.

Actually each hooks are made to perform specific task, like -To make state,To use componentLife cycle.
for different work we need different hook

Without Hook

Functional

StateLess

Class

StateFull

Benifit of Hook

Functional

StateFull

Class

StateFull

Why hooks ??

- More Control over component's state & lifecycle
- Write less and works more
- Untouched by **this** keyword
- More Easy to write & Debug

Cons of Hook

not Have much !

- Two State are not synchronized
- Increase Dependencies

React Rule

When the state changed , our whole app
re-renders

A large, rounded pink speech bubble with a small tail pointing downwards and to the left, set against a solid blue background. The text "Let's Demonstrate" is centered inside the bubble in white.

Let's
Demonstrate
